

# C: Crosses and Circles

Problem author: Konrad Letz

- **Problem:** Win tic-tac-toe on a large  $(59 \times 42)$  grid when going first.

# C: Crosses and Circles

Problem author: Konrad Letz

- **Problem:** Win tic-tac-toe on a large ( $59 \times 42$ ) grid when going first.
- Play the first move somewhere with enough space around it, for example near the center.

# C: Crosses and Circles

Problem author: Konrad Letz

- **Problem:** Win tic-tac-toe on a large ( $59 \times 42$ ) grid when going first.
- Play the first move somewhere with enough space around it, for example near the center.
- After the judge's first move, choose a direction such that the adjacent cell and both completion cells are still free.

# C: Crosses and Circles

- **Problem:** Win tic-tac-toe on a large ( $59 \times 42$ ) grid when going first.
- Play the first move somewhere with enough space around it, for example near the center.
- After the judge's first move, choose a direction such that the adjacent cell and both completion cells are still free.
- Play the adjacent cell in that direction.

# C: Crosses and Circles

Problem author: Konrad Letz

- **Problem:** Win tic-tac-toe on a large ( $59 \times 42$ ) grid when going first.
- Play the first move somewhere with enough space around it, for example near the center.
- After the judge's first move, choose a direction such that the adjacent cell and both completion cells are still free.
- Play the adjacent cell in that direction.
- The two possible completion cells are now two different winning threats. The judge can block at most one, so play the other one.
